FeltGood is a system of lighting fixtures that explores a soft, playful and sculptural approach to interior lighting. FeltGood marries sound-reducing felt sides to bright white top and bottom light diffusers. The many shapes and colorful options available in the collection bring upbeat clever solutions to any space.

The felt is composed of 90% recycled polyester fibers. The soft, textured felt is wrapped around basic geometric forms using a patent pending technique that produces a stitched detail at the top and bottom of each shade (Pat. Pending 699,616). The stitches become an attractive design element that glows when illuminated. The stitching and soft-corners create a clean and modern design language across the collection.

The range of sizes and shapes offered in the FeltGood collection makes it easy to create eye-catching singular or grouped lighting arrangements. Mix and match the shapes, colors, and suspension heights to design your unique ceiling solution.

Let FeltGood help you address those difficult ceiling challenges found in hospitality, commercial, educational, residential, retail, and healthcare environments. Use FeltGood in dining areas, libraries, atriums, reception areas, hallways, shared workspaces, ballrooms, waiting rooms, conference rooms, and classrooms.
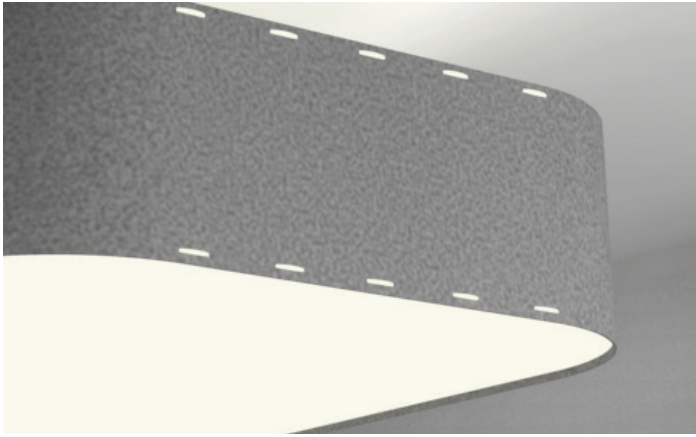

Share the fun of this diverse and customizable lighting system!

Fire Farm®
INNOVATE <> ILLUMINATE

Each fixture of the FeltGood collection has been designed to stand-alone as a single pendant or be used together in larger design configurations.

FEATURES AT A GLANCE:

• Modular system includes 10 shapes, multiple sizes, and 9 colors to create many combinations.

• 1/8 inch (3mm) thick polyester felt is made from up to 90% post-consumer recycled content, and also provides passive acoustical benefits through sound reverberation dampening.

• The 10 inch height of all the pendants is ideal for working at lower ceiling heights.

• Fine aircraft cable suspension and 6ft white electrical power cords are fully field-adjustable.

• Track and ceiling flush mount options available.

• Gloss white polymer top and bottom diffusers allow light distribution up and down.

• Powder painted white ceiling canopy with 8 inch white polymer decorative cover disk.

• FeltGood fixtures use standard E26 medium-base sockets which accept TRIAC-dimmable 120v LED type A bulbs (GU-24 socket options available).

• All fixtures come with TRIAC-dimmable LED bulbs that can be easily replaced later with easy-to-find standard screw-in lamps to provide different lumen output, different color temperature, or different color rendition as technology evolves and is available.

• Very light-weight. All fixtures weigh less than 15lbs (7kg) each.

• Custom shade heights, custom suspension lengths, custom lamping, and custom cord color available by contacting the factory.

FeltGood shapes are carefully chosen to give YOU, the designer, the tools to create solutions for a wide range of interior challenges. We are excited to see what you come up with!

The shapes are designed to work together as a system with ends and side widths that visually align with each other. This allows you to assemble larger arrays and configurations using individual fixtures.

All of the shapes provide the opportunity to change direction in a path and the rhomboid shape offers a transition from one end-size to another. Each of the shapes are available in standard incremental sizes to allow easy mixing and matching.

Some ideas on how to use FeltGood:

Chandeliers: Create unique large chandeliers by combining interesting shapes and colors together. Consider suspending them at different heights to create vertical interest.

Arrays: Repeating shapes in an array can provide cover for difficult ceiling conditions and provide a more aesthetic focus of attention.

Acoustical: The polyester felt shades assist in reducing acoustical reverberation in a space. The use of multiple shades increases the benefit.

Wayfinding: Linked shapes can be arranged to provide wayfinding and provide visual interest in hallways and passageways.

Challenging Spaces: Got a column in the middle of your room? Now you can tackle those really tough spaces by combining shapes to put the light where you want it and look good doing it!

The possibilities are as limitless as your imagination!

Contact the factory for Sketchup or Revit files to make your layout and specification process easier.
